

# Challenge to public debt sustainability

Maximum sustainable level of public debt (Blanchard, 1985):  $\hat{d} = \frac{s^*}{r-y}$

In the next 5Y:

$s^*$  : maximum politically feasible primary surplus ↓ : rise in defence, public investment, healthcare spending

$r$ : average interest rate on public debt ↑ : effect of end of ultra low interest rates

$y$ : ↓ demography, AI (?)

➡  $\hat{d}$  goes down. If  $d > \hat{d}$  the debt keeps increasing unless....

# Vertical fiscal policy coordination
